

MEMSIC's VG800CA establishes a new level of performance for standalone "unaided" inertial systems. The VG800CA combines advanced MEMS rate gyro and accelerometer technologies to provide a superior solution for measurement of dynamic roll and pitch angles in demanding environments.

**NEXT GENERATION**

**Features**

- Advanced MEMS Sensors
- Low Drift < 3°/hr
- High Reliability, MTBF > 20,000 hrs
- Stabilized Roll/Pitch Angle Outputs
- Fully Compensated Angular Rate and Linear Acceleration Outputs
- Digital (RS-232/RS-422) & Analog Outputs
- VG700-Compatible Interface Option

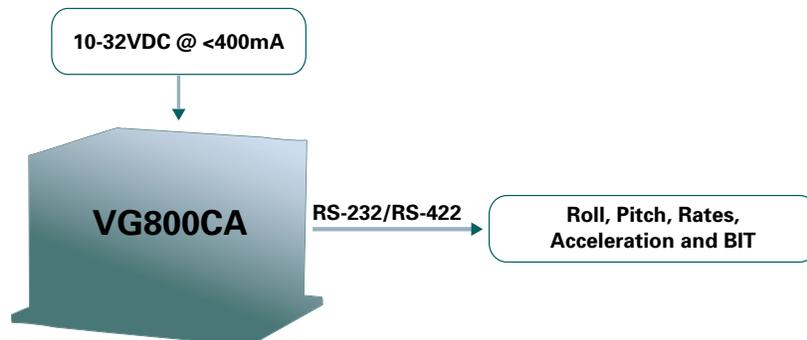

*ROV/UUV Control    Antenna/Camera Stabilization*

The VG800CA can be configured as a high performance IMU for integrated navigation systems, or as a vertical gyro for stabilization and control applications. Output data is available in both analog and digital formats, and a VG700-compatible mode is available for customers converting from the FOG-based VG700 to the MEMS-based VG800.

**Applications**

- Unmanned Vehicle Control (ROV/UUV)
- Antenna/Camera Stabilization
- Flight Data Acquisition
